

IceWave™ provides relief for sore muscles, sprains, strains and other injuries due to intense exercise.

- The IceWave™ patch from LifeWave NC™ is a non-invasive nanotechnology product.
- IceWave™ works immediately providing the injured area with a thermal effect.
- More than 80% of people who have been evaluated and patched have received positive results. Approximately 20-25 percent of the people received relief within a few minutes.
- Local thermal effects include the reduction of excess heat in an injured area; eased pain, decreased soreness and restoration of range of motion to the specific injured site.
- IceWave™ patches have been found in studies to have excellent results with acute minor muscle spasms and injury, as well as chronic muscle spasms.

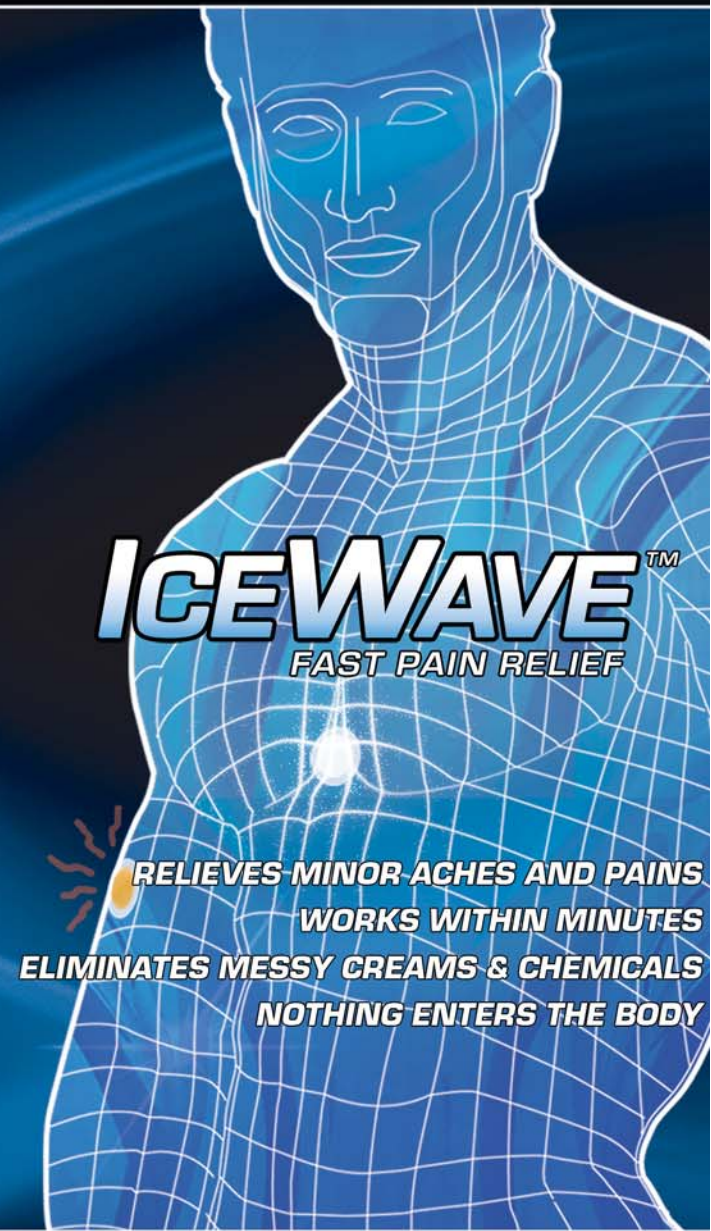

The end result is that independent clinical studies with infrared imaging have proven that users experience an immediate decrease in pain and discomfort within minutes of using IceWave™.

Use IceWave™ patches in place of cold or hot packs for minor sprains, strains, tendonitis, muscle soreness, aches and pain. IceWave™ can be worn during exercise and after. IceWave™ provides an immediate thermal effect over the area where the patches are applied.

Intense exercise, athletic performance, minor cramps, sprains, strains, tendonitis, muscle soreness, spasms, bruises, muscle tears, aches, stiffness, discomfort, etc. result in hot spots in the body.

We certify that the IceWave™ patches have been manufactured at FDA registered facilities in the U.S.A. and in accordance with the specifications in the patent filing. LifeWave NC™ does not endorse claims or have scientific proof that its products are effective in the cure, mitigation, treatment or prevention of disease in man or animal.
